Re: Hazardous Waste Information Request
Permit SW-260

Dear Mr. Kinsey:

I have reviewed your letter and the laboratory reports of the analyses of the waste and excavated soil from the Arctic Enterprises property in Moorhead, Minnesota.

The information provided the Department shows that with the exception of the uncured gel coat (sample WR 72311) these wastes are not by EPA definition a hazardous waste. The uncured gel coat which is apparently an EP toxic waste, is below the generator exclusion level, and as you indicated would be treated to render it non-hazardous.

For the above reasons, it is acceptable to the Department for this proposed waste (40 yards of excavated material and 2 cubic feet of treated resins) to be disposed of into the Fargo landfill, if approved by the City of Fargo. At the present time, we have some reservations in recommending the Gwinner site due to incomplete permit application information and other technical difficulties.

We are requesting that you inform the Department prior to the actual disposal of the waste. Department personnel may wish to be in attendance during the disposal and may take a representative sample of this waste for laboratory analysis.

Should you have any further questions in regard to this matter, feel free to contact the Department.

Sincerely,

Neil Knatterud, Manager
Waste Management Program
Division of Environmental
Waste Management and Research
